DESCRIPTION

Rechargeable soldering iron specifically for cars

Heating time: 10-15 seconds Battery life: 35min real. Can be used even connected to the mains (charging) Lithium battery = 500-700 charging cycles No 220V => no electricity-related risk. 30W: high power for a small size. Unlike gas soldering irons, this one does not have any flame. Fire is prohibited in garages for obvious safety reasons. No adjustment as are required for gas soldering irons. No control or delivery of gas (logistically speaking, the delivery of gas is problematic. eg: in aircraft) No cable. Standalone and very mobile. Precision bit for fine soldering jobs (connectors, etc.). Universal bit for soldering cables (eg: wiring trailer-hitches). Bit for heat-shrink sheaths: Does not come into contact with the sheath, and therefore does not melt it. Work made easy thanks to its fast heating: No need to start heating up the soldering iron 10-15 minutes before starting to work. Here, heating is done in 10-15 seconds. The casing stays cold throughout the operation. Ready-to-use in just 10 seconds. No cable: maximum mobility. Device: Soldering iron power: 30W. Ergonomic, solid casing, sliding "On/Off" button + pushbutton for activating heating. LED light. Powered by a rechargeable lithium-ion battery 220 mAh 3.7V. Accessories contained in the kit: - Three 1/4-turn bits: Universal power, fine-tipped bit and bit for heat-shrink sheath. Micro-USB charging cable. Soldering iron rest. Wire Ø 1.0mm. Cleaning sponge. Heat protection cap and cutoff switch.
