**DESCRIPTION****Effort lever**

Bar used to apply a slight force to the front drivetrain to check the lateral and longitudinal play of the wheel on its axis. Drivetrain diagnosis is therefore quick and precise. Bar with lever 60 cm long with a double tip on the end. Force lever on one side and bar 20 cm long on the other. The tilt angle of the lever can be adjusted thus making it possible to work in the most difficult passages.

**SPECIFIC DATA**

Designation	PLAY CONTROL BAR AND FORCE LEVER
Sales reference	3255-BC
Weight (kg)	3.700
