DESCRIPTION

Connection kit for fuel connections

This kit is designed to enable the replacement and repair of pipes and connectors made of hard plastic, with the sizes commonly found in modern vehicles. This kit allows the technician to make an effective and professional repair that is conform to the OEM product. This kit consists of a hand-force tool with an innovative design combined with adaptors specifically machined to clamp the relevant fuel pipe and install the connector in the pipe. The method traditionally used in maintenance/repair garages to install this type of hard plastic pipe uses hot water to soften and dilate the pipe and then depends on the technician to force the connector into the pipe by hand. This may be an arduous task and does not always produce a perfect result, or a result that is not even usable. The tool ensures a perfect installation each time, quickly and easily, to guarantee that no parts are wasted and that the job will not have to be done all over again.- Applications: fuel/air pipes and vacuum pipes equipped with quick-connect couplings.- Sizes of the quick-connect couplings covered: 6.30 mm, 7.89 mm, 9.49 mm, 9.89 mm, 11.80 mm.- Always lubricate the connector with petroleum jelly or a similar product to facilitate assembly.- Suitable for use on the vehicle.- Design registered with the EU.
