## DESCRIPTION

### Electronic timing belt tension meter

The distribution belt electronic tensionmeter is used to ensure perfect tensioning of all belts with manual rollers. The tensionmeter can be used to check the tension of belts on vehicles of all marques. The values in Hertz are recommended by the manufacturers. Broad measurement range going from 30 to 520 Hz. A sensor is attached to the belt to take the measurement. Compact sensor. Compatible with all types of belts: distribution and accessory. The box contains a sensor positioning guide and a booklet giving the manufacturers' values in Hertz. Its small dimensions and the absence of a mechanical sensor to be fixed on the belt also make it possible to do away with accessibility problems. Booklet of values for Renault, Peugeot, Citroën, VW, Audi, Seat, Skoda, Ford, Fiat, Opel vehicles, etc. Weight: 1.500 kg.
