DESCRIPTION

Ultrasound leak detector

The main function is to transmit and receive specific ultrasound frequencies that cannot pass through glass or metal and to identify air or water leaks in a closed passenger compartment. The transmitter is placed inside the closed vehicle and creates a wave of ultrasounds that will escape through any non-tight seals. The receiver detects the exact position of these leaks.

SPECIFIC DATA

Designation	LEAK DETECTION TOOL
Sales reference	99-U
Weight (g)	870
