DESCRIPTION

Dismountable, folding cranes, 500 kg to 2t

Designed to facilitate the lifting and movement of engines and other transmission systems. Also useful in the industrial sector for machining, reconstruction and maintenance operations. Fast piston rise and precise descent controlled by the user thanks to an ergonomic handle. Dead man's handle principle: freezes any manoeuvre if the user loses control of the operation. The cranes are equipped with a safety valve calibrated to the nominal force of 50% above the recommended weight. Device for automatically setting the descent speed according to the load. Hydraulic unit swivelling up to 135° to allow the user to position themselves as well as possible for raising and lowering operations. The extendable arm is fitted with a handle to facilitate its positioning on the elevator arm. Has 3 or 4 notches to indicate the lifting force on each point. Wheels made of non-oxidizable and silent polyamide. Allows the passage of a Euro-type pallet. SAFETY: Crane descent stopped automatically if the user inadvertently loses control.
