DESCRIPTION

Electronic signal tester

The tool must be powered with 12 V (vehicle's battery) and it has an inductive probe which, when moved close to the component to be tested, confirms it is functioning by emitting an aural and light signal. The device detects the magnetic field generated by the component during engine starting or running. Functions for:- Petrol and diesel injectors- Pump injectors- Flow regulators- Electrovalves- High-voltage coils- Spark plugs- EGR valves- Idle regulation valves.

STANDARDS / DIRECTIVES
