DESCRIPTION

Flanged extractor

Flanged pullers for extracting ball bearings housed in a casing box, extraction of raceways by the interior borehole without the need for a support point. Utilisation: insert the flanged puller into the bearing and introduce the force screw.

By tightening it, the edges will separate creating a firm contact surface allowing you to carry out the extraction in complete safety.

Utilisation with inertia mass EX-137-M2N or extraction counter support EX-137-T2.
