DESCRIPTION

PHILLIPS® SCREWDRIVER

Range of screwdrivers specially suited to the screws with combined imprints found on relay, contactor, circuit-breaker, junction box, terminal block type electrical devices. Combined-imprint screws are difficult to handle with a standard screwdriver: flat blades difficult to centre, and risk of premature wear or of damaging the screws and imprints. The terminal-block screwdriver has a blade combining a flat and cruciform imprint as well as a central point, which makes it possible to automatically centre the tool on the head of the screw with a combined imprint, and thus guarantee more powerful screwing by reducing the risk of slipping = better sensations, less wear and greater safety when working.
