DESCRIPTION

INSULATED TORX® SCREWDRIVER

The end of the handles of the screwdrivers in this range is perfectly round offering the user excellent grip comfort when working. This design allows the user to turn the screwdriver in the palm of their hand without hindrance, even in intensive use when wearing electricians' gloves.

Identification ring Each screwdriver has a coloured ring on its handle corresponding to the screwdriver's blade type. This facilitates quick identification, whatever the storage position.

Perfectly smooth round end The round end to this handle fits perfectly into the hollow of the hand, enabling quick and precise rotation.

The handle's rotating ball The handle's rotating ball nestles in your palm and your fingers control the screwdriver's rotation.

Insulated blade The blade is insulated with an insulation sheath integral with the handle, injected directly on to the blade. This insulation complies with the NF EN IEC 60900 electrical standard and with the ISO 2380-1, ISO 8764-1 and ISO 10664 mechanical standards, and is VDE-certified.

The handle The ergonomic handle has a high-quality soft coating for comfort and adhesion. Its ergonomics enables powerful and comfortable tightening. Four handle sizes are available depending on the diameter of the blade, with marking of the relevant standards and the product's reference.
